Below is a **clear, actionable, step-by-step path** from **today pitch day**, specific to your model (Compliance Credits Circular Ecosystem).

STEP-BY-STEP PLAN (From Zero Pitch Ready)

** Phase 1: Groundwork & Validation (Week 1–2)**

 Choose your base segment: start with **education (colleges)** in Kochi.
 Select your pilot college (use your own college as the case demo).
 Do a simple baseline survey (energy + waste + e-waste).
 Get photos + basic data (not technical):

* Waste bins, electricity bills, e-waste storage, cafeteria waste, etc.

 Outcome: Real data + proof that colleges lack documentation & recycler linkage.

** Phase 2: Build Your Value Proposition (Week 2–3)**

Create a **simple statement** (not product yet):

> “We help colleges get NAAC points & reduce waste costs through verified recycling + digital compliance.”

Craft **three offerings**:

1. **Green Audit**
2. **Waste Pickup & Verified Recycling**
3. **E-Waste Certificate + Compliance Support**

 Outcome: Clear, small, realistic first business.

🔹 Phase 3: Build Your Network (Week 3–4)

🔹 **Identify 5 authorized recyclers/refurbishers around Kochi**
(E-waste + plastic + paper)
🔹 Visit or call them and ask:

* Do you accept waste from colleges?
* Can you issue GST invoice / EPR recycling proof?

🔹 **Outcome**: An **actual supply chain** 🔹 makes your pitch real, not theoretical.

🔹 Phase 4: Test Your Model (Week 4–6)

Choose your pilot college 🔹 **deliver a mini real service**:

You will provide:

1. **Mini Green Audit (PDF)**
2. **Waste pickup (at least once)**
3. **Compliance certificate from recycler**

You DO NOT need:

🔹 Tech platform
🔹 App
🔹 Marketplace

🔹 **Outcome**: A real “before 🔹 after” story for pitching.

🔹 Phase 5: Build Pitch Evidence (Week 6–7)

Prepare 3 real slides (from your pilot):

 Slide A: Problem with photos

* Unsegregated bins
* No waste manifest
* Stored e-waste
* Missing NAAC documentation

 Slide B: Your intervention

* Photo of bins labeled
* Invoice from recycler
* Evidence of e-waste handed over
* Mini audit report snapshot

 Slide C: Results

* * NAAC compliance points
* Certificates issued
* Revenue saved or earned by college
* Verified waste quantity diverted

** Phase 6: Build the Pitch Deck Story (Week 7–8)**

> **Narrative Format**

1. Waste & compliance are mandatory (+ penalties)
2. Colleges lack documentation + verified pickup
3. We fix both through compliance + verified recycling
4. We become a supply chain for credits later
5. Our pilot proves it (REAL photos + documents)
6. Scalable model SaaS + marketplace + credits

7. Ask (Funding/Mentorship/Grant)

 Outcome: Pitch deck ready.

** Phase 7: Pitch Target**

What you pitch:

* Not credits marketplace yet
* **A compliance ecosystem that later unlocks credits**

Why?

Investors love **low-risk entry high-value expansion**.

SUMMARY OF ACTIONS (Check-List)

Week	Action
1	Pick college + audit manually
2	Create 3 services (Audit + Pickup + Certificate)
3	Build recycler network (5 players)
4	Do one real service
5	Make results + photos into evidence
6–7	Build pitch deck using real data
8	Pitch

Final Advice

 Don’t build tech before you build trust.

 Don’t sell credits before you have verified sources.

 Don’t pitch a grand future without a small real proof.

 Your pitch power = **“We already did it”**, not “We will do it”.

If you want next:

I can create **your pitch deck content** and a **one-page business plan** based on this.

 Do you want **Investor Pitch Deck** or **Grant/Competition Pitch Deck**?

Choose one:

 Investor

 Competition / Grant
