

EcoTrace

PROBLEM STATEMENT

Compliance Gaps and Missed Opportunities in India's Environmental Sector

- Institutions and environmental operators across India face escalating compliance pressures from frameworks such as NAAC, NIRF, NABH, ISO, and ESG reporting.
- Most currently rely on outdated, manual systems that cannot generate verified data, which is essential for accreditation and future credit eligibility.
- Environmental credits (EPR + carbon) represent a multi-billion-dollar opportunity that is projected to grow significantly by 2030.
- Organizations without robust data infrastructure today will be excluded from participating in this emerging credit market.
- The current market lacks a system that simultaneously fulfills compliance needs while unlocking financial opportunities through environmental credits.
- Without this foundation:
  - Institutions may struggle to achieve accreditation benefits.
  - Environmental operators miss out on high-margin long-term revenue from monetizing credits.
- Opportunity: The market is ready to evolve, and building the infrastructure now allows organizations to seize future compliance and credit monetization advantages.

EcoTrace: Unified Platform for Compliance and Credit Generation

Automated Compliance

Streamlined accreditation processes for institutions meeting NAAC, NIRF, and NABH standards

Verified Documentation

Chain-of-custody tracking and audit-ready evidence for environmental processors

EPR Credits Today

Immediate credit generation workflows for Extended Producer Responsibility obligations

Carbon MRV Ready

Baseline creation and monitoring preparation for future carbon credit issuance

Customer Segments and Measurable Benefits

Institutions — Clear Compliance Gains

Colleges & Universities

- Improve NAAC Green Practices, NIRF Sustainability, and Go-Green scoring through verified data
- Generate traceable evidence for SSR, DVV responses, and accreditation audits
- Meet emerging sustainability reporting requirements with confidence

Schools

- Verified waste management records aligned with CBSE/ICSE guidelines
- Enhanced green-campus positioning for parents and CSR partnerships

Hospitals

- NABH-compliant documentation for biomedical waste management
- Reduced audit risk through verified chain-of-custody tracking

Corporates

- ESG reporting compliance with validated sustainability disclosures

Environmental Operators — Financial Upside

Recyclers

- Higher-value contracts through verified input documentation
- EPR credit eligibility unlocking new revenue streams

Biogas, Biochar & Biomass Units

- Structured MRV preparation for high-value carbon credits
- Multi-year baseline datasets for future credit issuance

Refurbishers

- Verified certificates strengthening OEM relationships and partnerships

Both customer segments benefit directly from expanding environmental credit markets whilst maintaining operational excellence today.

Product Value: Operational Excellence Meets Credit Opportunity

Operational Value

- Automated documentation aligned with NAAC, NIRF, NABH, and ISO standards.
- Verified digital waste traceability eliminates manual errors and creates audit-ready compliance evidence.
- Institutions receive accreditation-ready sustainability reporting whilst significantly reducing administrative workload.
- Audit-ready compliance evidence
- Reduced manual workload and compliance errors
- Accreditation-ready sustainability reporting

Credit Value

- Immediate EPR credit generation workflows
- combined with carbon MRV onboarding and baseline creation.
- Multi-year traceable datasets position organisations for issuance in markets projected to grow 15–20x by 2030.
- Early adoption creates compounding advantages as regulatory frameworks mature.

EcoTrace transforms institutional compliance into long-term economic participation, creating value streams that strengthen as environmental markets expand across India.

Marketplace Vision: Positioned for India's Credit Boom

EcoTrace is building a verified, multi-credit marketplace aligned with accelerating environmental markets. Our platform architecture anticipates and enables the dramatic market expansion occurring between 2026 and 2030.

1 Market Conditions

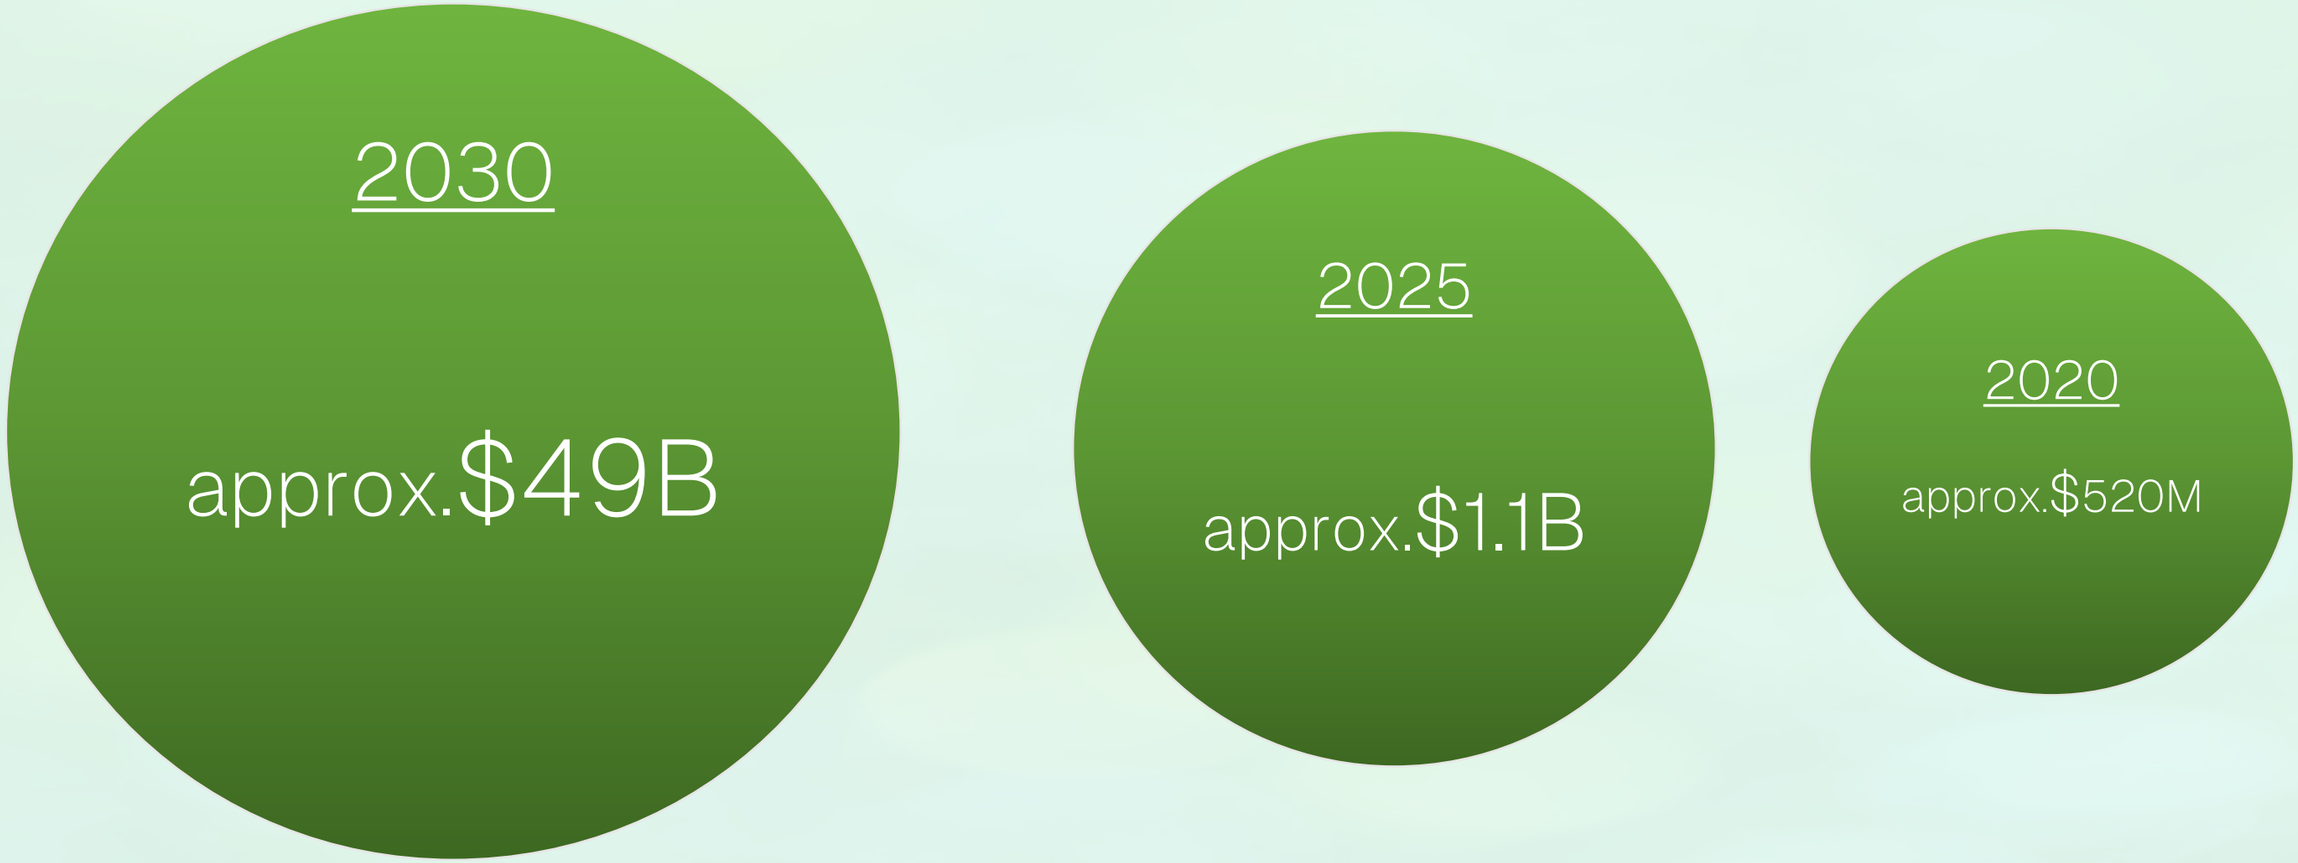

- Global carbon credit demand projected to grow 15–20x by 2030
- India's compliance carbon market activates by 2026
- Annual EPR obligations rising across plastics, batteries, tyres, and e-waste
- High-quality MRV-backed credits commanding premium pricing

2 Early Adoption Advantage

- Carbon accreditation requires 2–3+ years of baseline monitoring data
- Institutions and processors onboarded today gain early access to credit markets
- Verified datasets become a defensible competitive moat
- EcoTrace captures both credit supply and verification infrastructure simultaneously

> The marketplace matures exactly as India enters its credit boom cycle. Organisations building verified datasets today will control access to tomorrow's highest-value environmental credits.

Marketplace Vision: Positioned for India's Credit Boom

Revenue Model: Stable Foundation With High-Margin Upside

Recurring Revenue

- SaaS subscriptions from institutions across education, healthcare, and corporate sectors
- Workflow subscriptions from environmental processors and operators
- Predictable monthly income supporting platform development

Transactional Revenue

- Certification and verification fees for compliance documentation
- EPR credit generation commissions
- Carbon credit issuance facilitation fees

Marketplace Revenue

- Trading fees from credit transactions
- Portfolio aggregation services for large buyers
- ESG data products for reporting and analysis

This diversified model creates a stable foundation today whilst positioning EcoTrace for high-margin upside as the credit ecosystem scales. Revenue streams strengthen automatically as regulatory requirements expand and market participation increases.

Strategic Advantage: Timing Creates Compounding Returns

EcoTrace benefits from early positioning in a market where timing creates compounding returns. Our strategic advantages strengthen automatically as adoption scales and regulatory frameworks mature.

Institutional Retention

Institutions gain accreditation improvements and ranking enhancements, driving long-term platform retention and expansion

Operator Engagement

Environmental operators unlock financial upside through credit generation, increasing platform engagement and data quality

Defensible Moat

Early MRV and EPR datasets form a competitive moat that later entrants cannot recreate or replicate

Regulatory Tailwind

Expanding compliance requirements make the platform increasingly essential for market participation

EcoTrace's datasets and workflows strengthen automatically as adoption scales. Network effects and regulatory expansion create natural barriers to competition whilst increasing platform value for all participants.

Long-Term Outlook: Building India's Environmental Infrastructure

0–3 Years: Foundation

Broad institutional adoption driven by accreditation and compliance needs. Processor onboarding accelerates with rising EPR obligations. Establish comprehensive MRV baselines for carbon projects across diverse sectors.

3–5 Years: Credit Activation

First carbon credit issuances validate platform methodology. Marketplace pilots launch for EPR and carbon trading. Institutional ESG integrations expand across corporate and educational sectors.

5+ Years: Market Leadership

EcoTrace becomes a unified environmental credit and compliance exchange. Institutions benefit from improved rankings and verified sustainability credentials. Operators monetise environmental impact at scale. EcoTrace establishes itself as core infrastructure in India's environmental data ecosystem.

Our long-term vision positions EcoTrace as essential infrastructure connecting compliance, verification, and environmental credit markets. As India's sustainability requirements expand and credit markets mature, EcoTrace becomes the trusted platform enabling organisations to meet regulatory obligations whilst capturing significant economic value.
