Got it. Here is the **full formatted content** you can copy-paste into Word/Docs/Canva and export to PDF yourself.

GreenTrace Circular Systems

Smart E-Waste Traceability & Value Platform

Turning e-waste into measurable value and traceable credits.

⚠ Problem

Kerala generates large volumes of e-waste, but most of it:

- is **not sorted properly**
- **has no traceability**
- **loses refurbishable value**
- **misses EPR & carbon credit opportunities**

As a result, valuable electronics get scrapped, and legally sellable credits are unclaimed.

✅ Solution

A **Smart Scanner + Digital Traceability Marketplace** that:

- Scans e-waste items
- Identifies material type (metal, battery, PCB, plastic)
- Measures scrap value & calculates EPR/carbon credits
- Logs items into a traceable system
- Routes items to **refurbishers or recyclers**
- Enables **credit brokerage** with corporations

□ Product Components

□ Smart Scanner

- Weight measurement
- Material category detection
- Value & credit calculation
- Hazard flagging (battery, damaged cells)

Traceability Platform

- Item ID creation
- Material & weight logging
- Estimated value & credits
- Compliance reports for recyclers/corporates

Refurbish & Recycling Marketplace

- Refurbishable devices sold to repair shops
- Non-refurbish scrap sent to authorized recyclers
- Credits sold to corporates with EPR responsibility

Revenue Model

Stream	How You Earn
Scanner sale/subscription	Monthly or one-time
Marketplace commission	3–8% of each transaction
Credit brokerage fee	5–20% as service fee
Traceability SaaS	Annual subscription

▯ Unique Proposition

We convert e-waste into **measurable value + traceable credits**, building Kerala's first **tech-driven circular electronics ecosystem.**

▯ Target Market

- Authorized e-waste recyclers
- Refurbish/repair shops
- Corporates with EPR obligations
- Colleges & institutions
- Government collection centers

▯ Why Kerala First

- High electronic consumption (urban Kerala)
- Strong e-waste regulation & literacy
- Lack of digitized traceability for refurbish/recycle

- Easy access to early pilot partners in Kochi/Ernakulam

⚠️ Risks & Mitigations

Risk	Mitigation
Irregular feedstock	Partner with collection centers
Sensor inaccuracy	Calibrate with pilot testing
Credit price variation	Service-fee model instead of resale
Low refurbish network	Onboard repair shops first

🚀 Pilot Strategy

1. Build table-top scanner prototype
2. Partner with 2–3 recyclers + 5+ refurbish shops
3. Scan & log sample devices; compare value outcome
4. Measure credits & value captured
5. Optimize classification & documentation accuracy

🎤 Pitch Line

“We turn e-waste into measurable value and traceable credits using a smart scanner and marketplace — powering a circular electronics ecosystem in Kerala.”
